

Lyme Disease Survey

The Lyme Disease Association of Southeastern Pennsylvania, Inc. (LDASEPA) wants to get an idea of how prevalent Lyme disease is in Pocopson Township. This will provide data that we will use to design a more comprehensive study covering a larger area of southeastern PA. We gather no personal information in this survey. It is designed only to get a sense of the scope of the Lyme disease in our community. We chose Pocopson because it is a relatively small township in the middle of an area that has a very high incidence of Lyme disease. The results of this survey will be available on our Web site.

Please help us by filling in this short questionnaire on the lower half of this card. Tear off the completed card and drop it into any mailbox – we have already placed a stamp on the card so you do not have to. If you have any questions about this survey, call Pocopson resident Doug Fearn at 610-793-1533. Thank you!
